Case Studies

Tax Product Development

The client operates as a service provider in the tax compliances and tax compliance process consulting domain. The purpose of the application is to create an environment that helps companies adhere to their tax positions on a per-transaction basis and minimize exposure and risk related to non-compliance. The rule based application caters to rules and regulations of different states of India. Inter alia, the application creates and maintains accurate tax and credit registers and generates returns and other mandatory submissions.

Key Features:

- Integration with SAP and other ERP applications
- Business rule driven orchestration of state VAT laws
- Automated scheduling & tracking engine to define and manage workflows
- Dashboard based activity and exception tracking on the basis of access rules
- Use of J2EE framework for high security and rapid development

Client: One of India's leading professional services company in the area of taxation

Technology: J2EE Framework, Struts, Hibernate, Oracle 10g Database

Interactive Bank Portal

Conventional Net Banking Portals using older technology (e.g. HTML based) suffer from numerous limitations such as non realistic website navigation, unorganized clusters of huge information, complexity of sites and non-intuitive navigational flow, non-targeted page refreshes result in slow transaction processing, difficult inter-departmental navigation and others. All these limitations make net banking seem formidable/inconvenient resulting in lesser net banking users.

Our product makes the net banking portal correlate to a real world banking experience. The bank's customers will be thrilled by the natural look, feel, and functionality of our product that they can relate to the physical banking experience. Our product resolves all the limitations of older technology portals and increases the ROI potential of the bank's web enabled banking infrastructure giving NEW AGE NET BANKING!

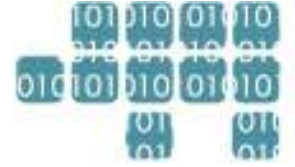

Key Features:

- Easy to use, highly interactive, very user friendly and close to real navigation
- Increased transaction and page loading speed
- Multiple actions in one page
- High Security Application

Client: ICICI Bank (Through Urja)

Technology: Flash Vector, Java, AJAX, SQL Database, Websphere Application Server, XML, CSS

Other Projects for ICICI: I-mint Online Loyalty Portal (J2EE, Struts, Pramati Application Server, Web Services, Oracle 9i Database), Project Management Tool (Java, Oracle 9i Database, AJAX), Richlife Events Portal (PHP & MYSQL Database) & others
